

Overview:

Newgene Biotecnología S.A. is a pioneering medical technology company based in Córdoba, Argentina. Established on May 6, 2021, the company has positioned itself as the sole domestic manufacturer of disposable syringes in the country. This initiative aims to reduce Argentina's reliance on imported medical supplies and enhance self-sufficiency in the healthcare sector.

Sector:

Operating within the medical manufacturing industry, Newgene specializes in producing high-quality disposable medical devices, primarily focusing on hypodermic syringes.

Products and Services:

Newgene's flagship product is the sterile 1ml hypodermic syringe, featuring:

- A rubber stopper with an extension to minimize waste.
- A cylinder with a clear scale and safety markings.

- A high-resistance plunger.
- A Luer slip tip for secure needle attachment.

The company's production facility includes a controlled environment certified to ISO 8 standards, ensuring the highest quality and safety in manufacturing processes.

Key Statistics:

- Investment: \$2.5 million USD in facility development and technology acquisition.
- Production Capacity: 150,000 syringes per day, aiming for 70 million units annually.
- Workforce: Currently employs 20 staff members, with plans to expand to 65 in the medium term.

Strategic Objectives:

- Import Substitution: Addressing the national demand for approximately 550 million syringes annually, which are predominantly imported.
- Export Expansion: Targeting markets in Chile, Paraguay, Peru, and Colombia to distribute their products regionally.
- Product Diversification: Plans to develop syringes of various sizes to meet diverse medical needs.

Newgene Biotecnología S.A. represents a significant advancement in Argentina's medical manufacturing capabilities, striving to enhance national healthcare infrastructure and reduce dependency on imported medical supplies.
